DevOps

Are you motivated to improve team productivity by implementing continuous integration solutions? Do you like managing cloud infrastructures? Do you enjoy sharing your passion and know-how with other members of the team? Then join the DigiTeam!

Our Mission

By developing invoice presentment, payment and Open Banking solutions in partnership with integrators, invoicing & accounting software companies, Digiteal helps its customers to get paid faster, more regularly and at a lower cost.

In other words, Digiteal is helping companies to use the "2024" best practices (by reducing the ecological & economical waste of paper bills for ex) to finally improve the user experience of consumers.

Our Company

Our Fintech is a payment institution certified by the National Bank of Belgium and a European project. It is compliant with rigorous regulations of the financial sector, yet you will be surprised, among other things, by our self-management type of organization. At the heart of all our activities are trust and transparency towards our employees, customers and investors.

Created in 2015 by the payment expert Cédric Nève, Digiteal is a scaleup with notorious shareholders such as the Colruyt Group and Credendo. Take the opportunity to participate in the early stages of the adventure with us.

Our clients are public and private companies, usually sending mass payment requests (online payments, invoices, requests to pay, etc) such as E-commerces, Water distribution companies, Energy, Hospitals, Municipalities, Marketplaces, etc. Some references that you may know: Mozzeno, Elindus, DATS 24, Rombouts, Van Zon, Symeta Hybrid, in BW, etc.

Your role within Digiteal

As a devOps, you will integrate the dev team to take on various responsibilities.

- ▸ You maintain and improve the technical infrastructure of the company. You are in charge of maintaining and evolving our cloud infrastructure (AWS) to stay up-to-date with current technologies and adapt to new development realities.
- ▸ You take care of the "on-premise" infrastructure and set up all the tools used by the development and operations teams such as GIT, Artifactory, Sonar, ELK Stack.
- ▸ You organize office networking and account management. This means setting up the VPN configuration; organizing LDAP accounts, Google work accounts, etc.
- ▸ Working closely with the developers, you lead the development of CI/CD solutions to ease the development cycle.
- ▸ Working closely with the operations team, you organize the operational monitoring with tools such as Dynatrace to improve development metrics, you define rules and alerting to prevent issues. You monitor DB requests and usage to prevent issues.
- ▸ Working with the security officer, you review vulnerabilities through our dependencies and review the infrastructure to stay up to date with the latest recommendations.

Your profile

▌Must have

- ▸ You have a bachelor's degree, master's degree in IT orientation or equivalent experience.
- ▸ You have a solid experience working in devOps; as a backend developer the devOps world always interested you and you are looking to reorient yourself to that field.
- ▸ You want to get involved in a project strongly focused on collective intelligence and self-management. You are able to be autonomous while being a teamplayer. Last but not least, you are able to achieve the targets assigned to you.

▌You master the following technical fields:

AWS   CI/CD

Unix administration   Network infrastructure

RDBMS   ELK Stack

Proficiency in English is required. A good command in French is appreciated but not mandatory.

▌Nice to have

- ▸ Experience with Docker / Git / Jenkins or other build pipelines
- ▸ Experience in network security
- ▸ Knowledge of Cloud HSM

▌Additional points (bonus)

- ▸ Experience in backend development
- ▸ SQL databases design and optimization

Why Digiteal?
